## Natural Stone from Vietnam

**Dear valued customers,**

Eureka Stone Vietnam is a family run business based in Hanoi – the capital city of Vietnam. The company was established officially in 2005 and has rapidly become one of Vietnam's largest exporters of natural stone products.

We produce and export a wide range of natural stone products to suit present day market trends.

We hold large stocks of Blue limestone, Pure white marble, Basalt and Granite for both internal and external uses.

We have been committed to build long standing customer relationships, hence we provide a proficient and reliable service at the most competitive prices.

Eureka Stone Vietnam is here to provide our customers with consistent, top quality products and uncompromised services. With our devotion to our customer and the highest of quality of materials, we are able to provide each customer, large or small, exactly what they desire and the excellence they expect...

## Bluestone (Limestone)

Bluestone is a limestone with a more or less sharply defined blue gray color characterized by the presence of a lot of crinoïds. Crinoïds are very small skeletons from sealillies. Blue stone contains +/- 96 % of CaCO<sub>3</sub>, the dominated mineral in most of limestone.

This stone contains a high part of fossilized fauna, sometimes visible on the surface. Bluestone is a very high dense material. Its natural ability to withold harsh and unfriendly weather conditions is amazing. It is also resistant to freeze-thaw cycles.

We have to make a distinction between the different kinds of Blue stone coming from Asia. Specifically between the Asian Blue from Vietnam and the Jinin Stone from China. Indeed, the petrographic data from both materials (Belgium and Vietnam) match very well. The most important difference between both sorts is that the stone from Vietnam manifests more color tones than the Belgian one. The "Jinin Stone" from China is not a blue stone. It is a limestone with a very high grade of dolomite. Even though both stones approach very much the Blue Stone from Belgium and even both are offered as "Blue Stone", only the "Asian Blue" from Vietnam can have the predicate "blue stone".

White Marble Mushroom Split - project in Japan

Marble Wall panels are our most rugged and dramatic stone. With its chunky individual profile, Marble wall panels create some serious shadow effects when used out doors or indoors with directional lighting. Marble wall panel can have installed with space between them for grouting or you can tightly dry stack them for a more authentic look.

## Granite

Granite is a highly resistant and attractive igneous rock which powerfully transmits Mother Nature's forces and evokes its place of origin... Its unique range of colors, often exotic and surprising, makes it very adaptable to different applications and trends in both interiors and exteriors architecture. The results convey refined beauty, exclusiveness and an element of the avant-garde.

## Basalt

Basalt rocks are extrusive mafic rocks, containing by weight less than 52% silicon oxide, the chemical composition corresponds intrusive gabbro, with dark color, mineral composition of labrado, pyroxene, olivine. Basalt create large area in Vietnam, especially in the Tay Nguyen and the South. The weathering of basalt creates the red soil, red brown soil fertility or bauxite ore. Heated basalt stones may flow to cotton spinning glass, or cast as acid-proof materials.
